Teddy Bear Patterns
We will learn about colour patterns in this book. The teddies will help us, come and have a look.
Here are the teddies, red, green and blue. Let’s sort them by colour, the yellow teddies too.
Now count all the groups. Is it two, or is it more? Let’s count together: 1, 2, 3, 4.

The teddies will help you make a pattern so neat. The fun about patterns is they always repeat.
Line them up neatly in two-colour pairs. Then repeat, and you have made a pattern of bears.
The green teddies want to join in too. Let’s put them here, right next to the blue.
And if we put a yellow after each green, we have a four-colour pattern, the best I've ever seen.
Four colours in order. Wow! What a sight. Now say the pattern from left to right.

Red    Blue    Green    Yellow    Red    Blue    Green    Yellow
This is also a pattern that is easy to do. Green, green and blue, green, green and blue.
There are so many patterns we can make on a line. Blue, blue, red and yellow. Then again, one more time.
Can you count all the teddies in this pattern? That's right; it is ten. Now let's make a new pattern with teddies again.
We arrange them by colour and in pairs. That means each group has two teddy bears.
The teddies have now made a pattern for you. Can you count all the teddies? Maybe count by twos?
Now you know how to make a pattern so neat. Just remember that the patterns always repeat.
